MGI Euro Bond Fund

MGI Euro Bond Fund B21-0.0800-EUR (IE00BF12WP86) (the "Fund")

a sub-fund of MGI Funds plc

This Fund is managed by Mercer Global Investments Management Limited

OBJECTIVE AND INVESTMENT POLICY

The investment objective of the Fund is to provide income and capital growth.

The Fund is an index tracking fund. It is passively managed and will seek to achieve its objective by investing in a diversified portfolio of primarily Euro denominated investment grade debt securities including government bonds which are listed or traded on recognised markets and that as far as possible and practicable reflect the component securities of the ICE BofAML Euro Broad Market Index, unhedged as measured in EUR (the "Index").

Debt securities are securities which represent an obligation of the entity issuing the security to repay the amount received for the security plus interest.

The Index tracks the performance of EUR denominated investment grade debt publicly issued in the eurobond or Euro member domestic markets, including euro sovereign, quasi-government, corporate, securitized and collateralised securities. The Fund may use optimisation techniques in order to achieve a similar return to the Index; this strategy seeks to build a representative portfolio that matches the risk and return characteristics of the Index without the expectation that the Fund will hold every underlying constituent of the Index. This approach may result in the Fund investing in only a relatively small number of Index constituents where such instruments provide similar performance.

The interest rates paid may be variable or fixed and payment

may be deferred or paid in kind. The Fund can invest in these securities directly and it can invest up to 10% of its assets in other collective investment schemes which fall within the categories specified by the Central Bank as permissible investments for UCITS ('**Underlying Funds**') which are consistent with the Fund's investment objectives and restrictions. The Fund may also invest in inflation linked securities including US Treasury inflation protected securities, which are securities indexed to inflation in order to protect investors from the negative effects of inflation. The Fund may invest up to 10% of its assets in fixed income securities which have or are deemed to hold a below investment grade rating.

The Fund may use financial derivative instruments (instruments for which the price is dependent on one or more underlying asset, '**FDI**') for hedging and /or investment purposes. FDI may enable the Fund to obtain market exposure up to 100% in excess of the value of the Fund's assets. The use of FDI may multiply the gains or losses made by the Fund on a given investment or on its investments generally.

The Fund will not distribute dividends. Income and capital gains from the Fund are reinvested.

You can buy and sell shares in the Fund on demand each day which is a bank business day in Ireland or the United Kingdom.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within five years.

RISK AND REWARD PROFILE

The risk and reward indicator value is calculated using historical data and may not be a reliable indicator of the Fund's future risk profile.

The risk category shown is not guaranteed and may change over time.

The lowest category, 1, does not mean risk free.

The value of investments and income from them can go down as well as up and you may not get back the full amount you invested.

The Fund is rated 3 due to the nature of its investments which include the risks listed below:

Fixed income: Investing in fixed income securities offers the chance to gain returns through growing capital and generating income. However, there is a risk that the institution that issues the security could fail to pay out on the bond, causing the Fund to lose its initial investment and expected income from the security.

Fixed income values are likely to fall if interest rates rise. If interest rates change considerably, as bonds mature, there is no guarantee that bonds of a similar type and yield will be available to replace them.

Sovereign debt: Investment in sovereign debt securities might involve special risks. The issuer of the debt or the governmental authority that controls the repayment of the debt might be unable or unwilling to repay principal or interest when due. Economic uncertainty might increase the volatility of market prices of sovereign debt.

Investments in below investment grade securities: Lower rated or unrated securities are generally subject to a greater default risk than such higher rated securities.

Liquidity risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

Operational risk: All funds are subject to the risk that something could go wrong in the day-to-day running of an organisation.

For more information on risks please refer to the "Special Considerations and Risk Factors" section in the prospectus and in the supplement for the Fund.

CHARGES

The charges you pay are used to pay the cost of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest
